OFFICE OF PETITIONS

AMENDMENTS TO THE SPECIFICATION

Please replace paragraph No. [0011] with the following amended paragraph:

[0011] Now referring to the drawings, there is shown in Figures 1-3 a cruncher for crunching large pieces of a product such as candy or medical pills into small particles or a powder. The device includes a main housing 10 which also functions as a reservoir 12 for receiving the small particles or powder 14 and from which the small particles or powder are dispensed through a dispensing aperture 16 in the main housing base 18 by use of a dispensing disk 21. The dispensing disk 21 is fixed in place by a central anchor pin ~~22~~ 27 which secures the dispensing disk onto the housing base. The dispensing disk has an angular slot 25 or circular opening in alignment with the opening in the housing bottom through which the small particles or powder are dispensed to a person. The small particles are dispensed by rotation of the base of the housing which aligns an opening in the base, not shown, with the slotted dispensing disk 21.
